Three Typhoid Shots Necessary For Immunization

According to Dr. T. A. E. Evans a number of people have come in to take one shot of typhoid serum and quit, evidently under the impression that one shot is all that is necessary to protect them from disease. He wishes to impress on every one that it is necessary to take all three shots in order to guarantee safety from the disease. Those shots must be taken not less than three nor more than seven days apart to be effective.

If you have taken one shot, be sure to return to the Health office on Railroad street to get the other two, otherwise you will not be protected.
