CIVIC CLUB ACCOMPLISHMENTS

The work that is monthly being done by civic clubs, composed of the leading men and women of this community...

Especially are the 2 women's organizations functioning for the best interests of us all during the recent flood crisis...

A COMMENDABLE TERM OF CIRCUIT COURT

The March term of Rowan Circuit Court has perhaps accomplished more than any session here in the last few years.

Sentences meted out by the March juries were less lenient and the juries brought fewer not guilty verdicts.

THE MORALS OF GOVERNMENT

Today the term "national power policy" is ironical indeed. For there is now no power policy worthy of the name.

The result of this, and of the advocacy by some public officials, of a ruthless "war to the death" against private utilities, is becoming apparent.

But ultimate results are definitely more important. If government can descend to so low a moral level...

We must decide what our policy will be. We must determine whether we shall destroy a twelve billion dollar industry...

that are taking place, there shall be a strengthening of democratic methods, reasonableness, fair play and open dealing...

THE 1936 CASUALTY LIST

The National Safety Council reports that during 1936 accidents killed 111,000 persons in the United States...

It is encouraging that plans for 1937 in most states involve material increases in safety work of all kinds.

ALL IN THE DAY'S WORK

In time of crisis, the resources and the public spirit of any industry are severely tested.

REPUBLICAN

We are authorized to announce: J. M. BUTCHER of Elliottville, Kentucky...

NEW AUTO FINANCING UP THIS JANUARY

The dollar volume of retail financing of new passenger automobiles shows an increase of 12 per cent for the month of January 1936...

EXCITEMENT: Cecil Fraley, Chesapeake and Ohio operator and Otto Carr, manager of the local basketball team...

At least sixteen agencies have been concerned with wild life conservation. So it goes, down a long list.

\$60,000,000,000 IN PREMIUMS The growth of life insurance in the United States is little short of miraculous.

It takes an election to get someone who has been your enemy all your life to give you the glad hand.

It's usually a happy marriage if he gives and she forgives.

This doesn't mean that every Moreheadian wins... but it appears that in past years the majority of the bigger wagers that come from here are on the winner.

So we'll make our derby predictions when the majority of the Morehead delegation starts expressing its sentiment.

POLITICAL ODDITY: It is a remarkable oddity that not a Rowan County citizen has announced his candidacy for jailer and it is probable that cut down from the 30 to 35 the field in this race will be that generally seek the office.

Some of the news stories carried concerning the decrease in the jailer's earnings...

TRIBUTE: Morehead bowed its head in grief last week as the news of the death of John A. Anglin, 77, reached town-people.

He was honest, sincere and a good neighbor. He was always typical of what a good citizen should consist of.

Even when pains started wracking the body that had served and served well he passed away without remorse.

His was a life that thousands of Americans live—they are the backbone of this great nation and to them no tribute is too high.

How Much Does It Cost To Make A Set Of License Plates?

Using Convict Labor Kentucky Produced Licenses At 7.4 Cents Pair

Automobile license plates for 1937 were produced at a cost of seven and one-fourth cents per pair at the tag manufacturing plant in the state reformatory at Frankfort, Road signs, manufactured in the same factory, were produced at an average cost of 60 cents per sign.

Operation of the license plate plant was resumed last week after seven weeks of idleness which resulted from the flood.

The first assignment, since the flood, was to manufacture, paint, wrap and pack 17,000 sets of plates for Jefferson County.

With completion of the Jefferson County order approximately 400,000 sets of 1937 license plates will have been made by convict labor in the reformatory.

NEW AUTO SALES DROP FROM DECEMBER FIGURE

The value of retail sales of new passenger automobiles declined sharply from December to January, according to index figures just received by the Louisville District office of the Department of Commerce.

Aluminum in various colors is being produced in a plant which has just begun operations in Birmingham, England.

Besides license plates the shop is now producing all road signs now being used by the state. These signs compare favorably in quality and design with those produced in reformatories of other states, yet the average cost is lower.

Thirty-eight of the forty-eight states are manufacturing their license plates in the state reformatories. Only twenty-one of these make both the license tags and the road signs.

The state of Kentucky first manufactured tags in the reformatory here in 1910 for issuance in 1931.

At the time the bill was introduced the State was paying commercial concerns from 21 to 23 cents per set for plates.

At the time the bill was introduced the State was paying commercial concerns from 21 to 23 cents per set for plates.

17,000 Given Work Through NRS Aid

Employment in Private Industry and Kentucky Homes

More than seventeen thousand placements of workers on jobs in private employment and over 64,000 four thousand placements of all types were made by the National Reemployment Service in Kentucky last year, according to an annual report released by Myer Freyman, state reemployment director.

The number of verified placements in private industry and with private employers was 17,032, a gain of 150 per cent over 1935, the highest level made in any particular year since the service began operation in Kentucky in 1933. Of particular significance is the fact that private job placements accounted for 31 per cent of the total job placements. While in 1935, although private placements made up 26 per cent of the total, 26,185 placements, only 6,402 were in private employment. Noteworthy, too, is the fact that in ten of the twelve months of last year, private placements increased over the corresponding months of 1935.

Industrial classification of the 17,032 private placements show that domestic and personal services, including hotels, restaurants and institutions accounted for 5,032 job placements; private building and construction, 3,456 jobs; manufacturing, 3,313; wholesale and retail trade, 2,928; agriculture and mining, 1,017; government service other than public works, 241; professional service, 313; transportation and communication 192; public utilities, 106; finance including banks, brokerage and insurance firms, 46; and miscellaneous classifications, 222.

Operation of the service during 1936 were characterized by a continued effort made to find jobs in private industry; 13,239 direct placements to employers were made, a gain of 136 per cent over 1935. Accompanying the rise in field visits, which was more pronounced during recent months, private job placements during the last 10 months of 1936 showed successively higher gains over the totals for the corresponding months of the preceding year.

The December private placements, 4,222, was a record for one month. Employer visits which numbered 3,001 was also a record for one month. That increased jobs are being effective in widening job opportunities for registered applicants may be seen by comparing with the December placement figure.

The 33,730 placements in public employment include work of the office of public employment, in regular units of Federal, State and local governments and regular construction activities of such governmental bodies. This work is strictly non-relief in character.

Homemakers' Exchange

of Helpful Household Hints and Recipes

Conducted by ELEANOR HOWE

In order to put candles into your candlestick holders so they will stand securely, put a small quantity of melted paraffin into the candlestick and seal the top of the candle in the paraffin; it is then held taut and straight.

When making a cake, remember to remove the eggs from the refrigerator about one-half hour before using. They will whip more easily and more satisfactorily when allowed to reach room temperature before beating. This idea works equally well when making meringue for pies.

Here's a recipe for CHILLED GRAHAM CRACKER PASTRY which can be prepared ahead of time and stored in the refrigerator until needed. If kept in a modern ice refrigerator the mixture will not dry out or absorb odors from other foods. Combine one cup graham cracker crumbs, 1/4 cup sugar and 1/4 cup melted butter. Work together lightly until well blended. Press into pie plate, shaping firmly all around. Chill in ice refrigerator until ready to use; then add favorite filling and serve.

When a cooked icing will not harden, add powdered sugar. The icing will immediately stop going in wrong places and doing things and behave itself!

The next time you make pastry, try substituting fresh orange juice for the water usually used. Keep in mind your refrigerator until needed. Bread, cake and pastry mixes, stored in an ice refrigerator, stay fresh indefinitely.

Such placements represent a 74 per cent increase over 1935. The 4,087 placements in relief projects assignments of relief persons in work of strictly relief nature. Total placements of all types were filled by 47,706 men and 17,163 women. New applications during the year numbered 67,248, 24.5 per cent less than in 1935, and a drop of 26.5 per cent from 1934. These new registrants included 1,883 veterans.

Active applicants on December 31, 1936, numbered 221,991 at the same time in 1935. Compilation of placement activities over the forty months the National Reemployment Service has operated in Kentucky show a total of 221,996 placements of all types. Of this number 171,817 or 77.7 per cent were on public works jobs, 42,828 or 19.3 per cent were filled by 47,706 men and 6,343 or 2.8 per cent were security wage placements.

Activities for the 9th district show: Placements 4,379 in 1936 as compared to 2,040 in 1935. Private placements 2,212 in 1936 as compared to 1,035 in 1935.

BRITISH FIRM HAS JEW'S HARP MONOPOLY

A Birmingham, England, company has the unique distinction of being the world's only manufacturer of jew's hars, according to a report to the Louisville District Office of the Department of Commerce.

For 200 years members of the family controlling this company have been producing the instrument and no effective competition has ever developed. It is very difficult to produce a good jew's harp because of temper, edge and tone vibrating metal making requires a species of skill which through inheritance must be developed by years of practice.

Today the men who are able to make a proper instrument number less than a dozen. Half the output of the Birmingham company is sold in Great Britain, 25 per cent in Empire markets, and 25 per cent in the United States.

Here is a method for dyeing children's faded clothes and using same time for preventing lace grilling. Wash clothes in warm water with ammonia from being dyed also. With an old toothbrush cover the trimming with melted paraffin, remembering that care should be taken not to have the dye too hot when dipping the dress. Lift up and down several times in the dye until correct shade is reached. (To assure even, uniform tint, use melted ice - manufactured ice water.) When the garment is dry, remove the paraffin and the trimming will be as bright and new as ever.

Here's a good recipe for CHERY CHIFFON PIE. Heat 1 cup of cherry juice to boiling point. Add 1/4 package of cherry-flavored gelatin and stir until dissolved. Remove from fire and chill in modern ice refrigerator. When gelatin is partially set, beat 2 eggs white until frothy. Add 1/4 cup of sugar gradually and continue beating until a stiff meringue is formed. Fold meringue into cherry mixture and pour into a baked pastry shell. Chill four hours in refrigerator. (Makes one 9 inch pie.)

If crocheting a spread, as so many women are doing nowadays, remember to purchase an extra ball of yarn for repair work; thus avoiding the possibility that the yarn cannot be matched later.

In order to keep a child covered in cold weather wear elastic to the two upper corners of the blanket and fasten on these to a strap fastened to the head and feet of the bed instead of using the "pinning" method. The elastic gives, but the youngster keeps covered.

SURVEY SHOWS 11,661 FARMERS HIT BY FLOOD

A survey made by county and home demonstration agents of local counties shows that 23,661 Kentucky farmers suffered losses in the flood, according to a summary of the figures issued by the University of Kentucky College of Agriculture. Reports were received from 71 counties directly hit by flood, and 39 non-flood counties.

The number of farm homes destroyed is placed at 1,458, valued at \$1,091,900. Sixty-one other farm buildings were washed away or totally wrecked, valued at \$629,355. Farm homes damaged were estimated to be \$1,819. Their damage being placed at \$1,252,410, with 14,239 other farm buildings damaged to the extent of \$73,520. Nearly half of a million dollars was lost in farm machinery and equipment.

Cattle lost in the flood numbered 7,378; hogs, 15,198; horses and mules, 1,564; sheep, 1,391, and chickens, 94,562.

Corn destroyed is estimated at about two million bushels; hay at 37,498 tons, and other feeds at 490,000 tons. Small grain, including that used for pasture, destroyed or seriously damaged is placed at 28,583 acres.

Losses to other farm property are estimated at a total of \$1,466,591. In excessive erosion occurred on 1,469,575 acres, and silt and gravel were deposited on 24,700 acres.

As a result of the great losses from the flood, a total of 8,022 farmers will need loans totaling \$1,747,250, the report says.

Post Flood Report Made At Frankfort

Damage Not As Great As Anticipated, Highway Department Says

A post flood inspection of the main highways in the western section of Kentucky by T. H. Cutler, Chief Engineer of the State Highway Department, brought out the heartening report that while there was considerable damage done by the flood waters it was not nearly so bad as was feared when the engineers made their first estimate before the waters had begun to recede. The highways in the western section suffered a greater damage than those of the other sections of the flood area.

In his report to the highway commissioner, Engineer Cutler stated that he found that it would be necessary to do some repaving at the Owensboro-Stanley section of U. S. 60 and the Henderson-Evanville Bridge on U. S. 41 and the Spottsville Bridge approach on U. S. 60 east of Henderson. Considerable settlements were in evidence at all of the river bridges in Western Kentucky.

This was particularly true, according to Mr. Cutler, at the U. S. 60 crossing of the Tennessee and Cumberland Rivers at Canton and Fenton, respectively. New high water marks were established that will cause a revision in plans at the Wickliffe-Cairo Bridge approach.

One of the queerest situations of the flood has the engineers blocked on the U. S. 41-W south of Hopkinsville. A large area of about five miles long and 1/4 mile wide at the narrowest point was flooded several feet, with backwaters coming out of the sink holes in that vicinity. While the water has receded elsewhere in the country round about, the water in this singular spot remains at a standstill and it may take several months for it to disappear.

It will be necessary to raise about 1/4 mile of the grade line approximately 5 feet on U. S. 41-W to get above the water level.

During his inspection tour Mr. Cutler began investigation of a new high line between Hickman and Fulton. A study of conditions in that section revealed that each year the high water of the Mississippi River isolates Hickman from the rest of the State of Kentucky and a new high road would be necessary to remedy this situation.

IN THE DISTRICT COURT OF THE UNITED STATES For the Eastern District of Kentucky

In the Matter of Samuel McKee Bradley, In Bankruptcy

Bankrupt.

To the creditors of Samuel McKee Bradley, of Morehead, in the County of Rowan, and District of Eastern Kentucky:

Notice is hereby given that on the 6th day of March, A. D. 1937, the said Samuel McKee Bradley was duly adjudicated bankrupt and that the first meeting of his creditors will be held at the office of the undersigned Referee, Second National Bank Building, in Ashland, Boyd County, Kentucky, on the 29th day of March, A. D. 1937, at ten o'clock, E. S. T., in the forenoon, at which time said creditors may attend, prove their claims, appoint a trustee, examine the bankrupt, and transact such other business as may properly come before said meeting.

L. C. FIELDER, Referee in Bankruptcy, Ashland, Kentucky, March 10th, 1937.

All claims must be accompanied by affidavit in form as required by the Bankrupt Law.

A huge block of marble weighing approximately one million tons will soon be mined at the Ravacione quarry of Carrara, Italy.

WILL HONOR MASTER

ERNEST SCHELLING, eminent American pianist and conductor, is the only pupil of the great Paderewski. A Sunday evening, February seventh, Schelling plans to honor his famous teacher who is now living virtually in exile at his Swiss estate, by leading the members of the Baltimore Symphony Orchestra in a performance of the only symphony composed by Paderewski. This performance will be particularly timely in view of the widespread interest aroused by the recent publication of the long-awaited memoirs of the Polish pianist and statesman.

FARMING BY IMPROVED METHODS

Written by the Staff of the University of Kentucky Agricultural Extension Work, College of Agriculture

ONE FARM PRODUCES 7 TOBACCO PRIZES

Of 15 prize sticks, at a community tobacco show at the Lewisburg high school in Mason county, seven were grown on the same farm, by three different growers. Warren G. Stambough, a student in agriculture in the school, won two first and one second prize, and the stick that beat him was grown on the same farm.

Mr. St. sold 916 pounds, produced on an acre, for an average of \$60 a hundred, one of the highest prices paid on the Maysville market. He grew No. 3 root-resistant tobacco, which was developed at the Agricultural Experiment Station at Lexington.

Charles Mathis, teacher of agriculture in the Lewisburg school, arranged by the show, and also a tobacco school which attracted 45 farmers.

DIET SPECIALISTS TO MEET APRIL 2-3

Dietitians of the state will come together April 2 and 3 at the University of Kentucky College of Agriculture for the annual meeting of the Kentucky Dietetic Association. With Miss Florence Imley, foods specialist for the agricultural college, in charge, the

program will consist of demonstrations, exhibits and talks by nutrition experts and physicians.

Out-of-state speakers will include Miss Lute Trout, Bloomington, Ind., president of the American Dietetic Association, who will discuss phases of the work of the national association; Dr. Marietta Eichenberger, Chicago, famous nutrition expert, who will talk of recent trends in the field; Miss Iver Wilson, Chicago, who will discuss meat buying; and Dr. Chi Chi Wang, of Cincinnati, who will tell of studies relating to child health.

During the past year, work has been conducted in the fields of administration, diet therapy, community education and professional education by committees headed by Miss Marie Wiggington, of Louisville, Norton Infirmary; Miss Edith Grundmeier, Lexington, of the University of Kentucky home economics department, and Dr. Stuart E. Erickson, Lexington, of the university home economics department.

SEED POTATO TREATMENT 2

Those growers who wish to save time, or have large amounts of seed to be treated, may wish to use the recently developed "quick dip" method, description of which follows.

As in the standard method, corrosive sublimate is the material, but muriatic acid is used with it to give it speed. In a crockery or wood container, put two quarts of water, ordinary temperature, and stir into it one ounce of muriatic acid, the acid that tanners use. Then, stir in one ounce of corrosive sublimate, which, because of the addition of the acid, will be found to dissolve quite readily.

Next, in a wooden tub or barrel of three capacity is at least 15 gallons, put seven gallons of water, and into it pour the dissolved corrosive and stir thoroughly. The treating solution is now ready. Into it, pour seed potatoes until the top ones are just covered, and leave them five minutes. Remove the potatoes, and replace them with a second lot, to be immersed, again, five minutes, and so on until four lots have been treated all of them five minutes.

The solution may be brought to usable strength again by adding corrosive sublimate and muriatic acid as at the beginning, but half an ounce of each, and adding water to bring the solution to its original level.

This reinforced solution may be used on three more lots of seed, five minutes each time, then reinforced again and used on three

lots more, each five minutes. It should then be discarded and a fresh solution made as at the beginning.

Because of the speed with which this treatment works, there should be two treating containers, to use alternately, if the potatoes are to be treated loose. The best way is to treat the potatoes in their sacks, but unless they fit the container closely, solution is wasted. With the potatoes loose, and the solution twice reinforced, two ounces each of corrosive sublimate and muriatic acid will be sufficient to treat over 12 bushels of seed.

If large amounts of seed are to be treated larger containers should be used, but the solution made up always at the rate of an ounce each of corrosive acid and to make 7 1/2 gallons of solution.

It should be emphasized that both these materials corrode all metals; always, wood or crockery should be used. These materials are deadly poisonous, taken internally. Discarded solutions should never be poured where puddles may form, from which live-stock may drink. Treated potatoes are poisonous, too; all care should be exercised that none are consumed. This applies particularly to the tubers or parts of tubers that always at the rate of an ounce each of corrosive acid and to make 7 1/2 gallons of solution.

Improved times increased the activity in farm building last year, a total of 9,084 new buildings in Kentucky being indicated by the reports of county agents to the College of Agriculture of the University of Kentucky.

Circular 3 of the college lists 329 plans available to farmers, including poultry and livestock equipment, dairy barns, hog houses, milk houses, tobacco barns, general barns, storage houses, dwellings, machine sheds, lime sheds, silos, ridge ventilators, water and sewer systems, self-feeders, etc.

The agricultural engineering division is prepared to help farmers desiring to repair, remodel or construct new buildings, as a result of the recent flood.

World production of bauxite, the basic material in the manufacture of aluminum, registered an appreciable increase in 1935 compared with the preceding year.

Beware The Cough That Hangs On

From a common cold

No matter how many medicines you have tried for your cough, chest cold or bronchial irritation, you can get relief now with Creomulsion. Creomulsion not only contains the soothing elements of the standard remedies, such as, Syrup of White Pine Compound with Tar, fluid extract of Licorice Root, fluid extract of Wild Cherry and Menthol, but also has fluid extract of Peppermint, its powerful phlegm loosening effect, fluid extract of Cascarol for its mild laxative effect and, most important of all, Beechwood Creosote is perfectly blended with all of these to reach the source of the trouble from the inside. Creomulsion can be taken frequently and continuously by adults and children with remarkable results.

Thousands of doctors use Creomulsion in their practice knowing how Creomulsion aids nature to soothe the inflamed membranes and heal the irritated tissues as the germ-laden phlegm is loosened and expelled. Druggists also know the effectiveness of Beechwood Creosote and they rank Creomulsion top for coughs because you get a real dose of Creosote in Creomulsion, emulsified so that it is palatable, digestible and potent for going to the very seat of the trouble.

Creomulsion is guaranteed satisfactory in the treatment of coughs, chest colds and bronchial irritations and especially those stubborn ones that start with a common cold and hang on for dreadful days and nights thereafter. Even if other remedies have failed, your druggist is authorized to guarantee Creomulsion and to refund every cent of your money if you are not satisfied with results from the very first bottle. Don't worry through another sleepless night—phone or go get a bottle of Creomulsion right now. (Adv.)
