SHORT SPAN

World Has Known 300 Years Of Peace In 5,500 Years

For the past 5,500 years—since 8,600 B.C.—the world has known only 300 years of peace.

In the deadliest arms race ever, the latest missiles, tipped with nuclear warheads, could kill 300 million people in one hour, could be used in an all-out war to destroy civilization as it is now known.

West to devise more weapons, each more powerful than the other.

Another aim was to create an atmosphere of trust between the United States and the Soviet Union, to check the risk of conflict through accident or miscalculation.

But now the disarmament conference appears endangered. The Soviet Union is refusing to agree to the fixing of a date for the resumption of the talks, in recess since last summer.

And no one knows whether the Russians would really get down to business if the conference does continue, particularly in view of China's determination to become a full-fledged nuclear power.

Gradual limitation and reduction of arms has been attempted before and has failed each time. Any hopes for success in the future are pinned on the assumption that people and nations will realize that no one is going to be the winner in a nuclear war.

The "Disarmament" agreement achieved so far were designed to create an atmosphere in which arms control progress could be made rather than to institute arms control as such.

Laff Of The Week

"Not a large rain, sir—just enough so I can get new tinting-glass for my car's side curtains."

Fulbright On Paris

Senator William Fulbright, Democratic (Arkansas) Chairman of the Senate Foreign Relations Committee, has suggested Americans who wish to travel in Europe in 1965 skip Paris, labeling the French capital a center of "sophisticated debauchery and artistic pocket-picking."

Fulbright noted we are facing a serious international balance of payments problem, that it would be helpful if Americans refrained from adding to the problem by leaving dollars in Paris, where U. S. tourists are so often cheated and overcharged by arrogant servants.

The Senator's words are an accurate description of what has been going on in Paris for a long time, and travel-wise Americans have, for some ten years now, been turning away from Paris.

Nevertheless, his words created something of a sensation. There are lovers of debauchery and there are those with selfish interests involved, and there are those who genuinely like Paris as it is, and

do not often encounter the woes of tourists.

But for most Americans, the advice is sound. Better calculated to please them, and provide an honest return for the dollar, are cities in Denmark and the Scandinavian countries, Germany, Holland, and eastern European countries such as Austria and Greece.

Spain, once a refreshing and cheap country to visit, is not as inexpensive as it used to be. There are delightful smaller places in Spain, France and Italy where honesty is found. But one can never count on it as a safe bet, in these traditionally tourist-overrun countries, Paris being the worst trap of all for the tourist.

A Sad Precedent

The newspapers recently reported that the Office of Economic Opportunity had held up funds for a Louisiana grant because it objected to some of Louisiana Governor John J. McKeithen's appointments under the state's anti-poverty program.

If charges made against some officials are correct, it may be that some appointees are extremists or segregationists. And it may be that a majority of Americans will be gratified that the OEO withheld funds from the state.

Yet those who think seriously about the long-term implications, and the precedents being established in this field, will feel no satisfaction but merely regret that such a course appears necessary. Two wrongs do not make a right, and it is clear in the Constitution that federal bureaucrats were not intended to have the power to pass upon the job appointments of Governors.

It was Congress, of course, that gave federal officials this power, it was pointed out by federal officials, and it is also noted—such a course was found necessary because of discrimination.

On the other hand, one can see the awesome scope of growing federal power and centralized government when federal bureaucrats veto Governors' appointments. It is a sight no one really enjoys seeing—even those who see no other course.

An Artificial Heart

Medical scientists and management experts are working together to develop a synthetic human heart.

This news was reported recently by General Bernard A. Schriever, head of the Air Force Systems Command, an organization which has managed some of the country's most vital defense programs.

Schriever said the National Heart Institute of the Department of Health, Education and Welfare has asked the Systems Command to help them adopt the command's management concepts in their program for development of an artificial human heart.

The heart would actually be installed in the human body to replace a defective one.

The General said the National Heart Institute wants to adopt Air Force procedures as a management model for developing a series of artificial body organs.

And so we seem to be truly on the brink of a new era in science and medicine.

Controlling Firearms

Self-preservation is undeniably man's strongest and most basic instinct.

And that's the first argument likely to be advanced by those who advocate easy access to firearms. They'll tell you that no one should be denied the means of protecting his person, his family, his home or other property from danger or destruction.

That's indisputable in theory. It's undeniable that such dangers oftentimes exist.

But as in everything else, there are two sides to the question. All too often the man with the gun poses the threat rather than protecting against it.

Current statistics indicate that firearms are the agent in some 5,000 homicides and as many as 8,000 suicides a year, and those figures are probably conservative.

It goes without saying that many of those lives would have been saved if a gun hadn't been handy in the moment of greed, despair or passion.

It does not seem too much to ask that some effort be made to keep firearms out of the hands of the criminal or the incompetent. The rule ought to be at least as strict as that governing use of a car, though some don't seem to think so.

Sky Diving

The fad or sport of sky diving has grown in popularity over the last few years for the sky diver and spectator.

The object of sky diving is to try to see how close the performer can come to a given point designated on the ground. Also important is body form and the period of free falling before the parachute activates his parachute.

Many a mother may wonder whether their sons should participate in such a sport. Without getting into the question of whether the mother or parent or spouse should make up the mind of their child or spouse, we would like to point out that this sport can be a dangerous one.

However, the danger can be greatly reduced by proper training with qualified instructors. The person who is merely seeking a thrill and does not want to go through the work of becoming a qualified jumper should beware of the sport.

A key to happiness in life lies in usefulness.

A hard task is eased by the application of immediate energy.

There is nothing morally wrong about being poor.

Health is very valuable to those who have lost it.

If advice is all you want, you can get it without expense.

Money isn't a problem, as long as it's yours.

MRS. VERSATILITY

Lilies are becoming popular in the United States. They have long been a great favorite in England, but until fairly recently they did not go over in this country on a large scale.

To succeed with lilies, there are two important factors to keep in mind. First: selection of the right kinds and the selection of a high quality bulb. Remember that the bulbs are perishable and easily bruised. They should be handled almost as carefully as eggs. Never buy bulbs that have been permitted to lie around in show cases or store windows.

In the garden, lilies require no more attention than any other plant. Good drainage is imperative. In ordinary garden soil is satisfactory, whether it is light or heavy makes no difference.

Relatively shallow planting is best. Do not dig down (soil) is rather than deep planting. If the soil at planting time is packed, do not dig it thoroughly before setting the bulb.

Do not place bulbs too close together. The exact spacing will vary with the kind of lily. Sometimes the early season evidence of fungous growth will appear. Apply Bordeaux mixture as a spray or dust. During the summer months applications of nicotine to control insects will help.

Because of the individuality of lilies, their placement in the garden is important. They are effective as early spring colonists off the edge of the lawn or to open in drifts against a hedge, wall or shrubbery border.

Talness has at last become recognized by women for the asset it is. It is true that a really tall woman will never be described as looking "slimling." She may look, instead, marvelous, handsome and... She can wear almost any kind of clothes becoming, with the exception of frills and bows that most of us have outgrown before we reach our teens, and... She has the advantage of never looking dumpy, and the middle-age spread will not hold the terror for her that it does for a short woman.

There are several points about dressing that the tall woman would do well to keep in mind.

She should be alert against too much material. She can usually wear a voluminous skirt or a voluminous shirt, but not both at the same time.

Never wear white shoes, shoes with open toes, or shoes with high heels. By all means wear high heels, but they are fine for a long walk, or for housework, but heels should be worn for other occasions. If you have a large foot, do not let people do for you what you can do for yourself. Go in for plain or tailored ones, and be in plain or your dish. Always wear longish gloves, and be in the same role of amount or number of pieces applies to the tall woman as well as the short.

Choose tie-color and two-part costumes whenever possible. The Empire line is not a good one for really tall women. The new shorter skirt length is a boon to tall girls.

NEWS FROM WASHINGTON

Washington, D. C.—An apparent scandal at an obscure school in Florida that's little known outside the state could set off the biggest auditing job ever tackled by the U. S. Office of Education.

If it comes off, it will involve a look at the operations of the National Defense Education Act student loan fund and could well result in some basic changes in this type of federal aid to education—or at the least—a tightening of the administration of the program.

A immediate target of the inquiry is the Gibbs Junior College at St. Petersburg where preliminary indications are that at least \$3,200 in NDEA loan funds wound up in a different pocket than was supposed to be the case.

So far the probe there has involved auditors from both the Office of Education and the General Accounting Office, with the FBI also getting into the act.

Of perhaps more significance, however, is the interest the case has triggered on Capitol Hill. A House Education and Labor subcommittee chaired by the 79-year-old Representative Green plans to delve into the Gibbs situation during field hearings to determine if it is an instance or typical of the sort

of thing that could be happening all over the country in some of the thousands of colleges where students are getting millions of dollars in NDEA money.

The subcommittee expects to hold at least six or seven such hearings in various parts of the country to check on the workings of NDEA and other federal aid programs and it's safe to guess that the Gibbs situation will be the forerunner of the subcommittee's thinking throughout the series.

And far as the audit is concerned, there are reports that Dr. Francis Keppel, and U. S. Commissioner of Education, is planning such a check on the accounts of many, if not all, the loans currently out under the program to see if there are any irregularities.

Another factor said to be disturbing the agency is the fact that some 16 per cent of the loans now in repayment status with one or more delinquencies as a child, contact an infection occur during the first three months of a pregnancy. Such a complication can lead to the loss of the pregnancy or can cause serious congenital abnormalities in the infant.

Medical scientists now hope they have found a seed to term that will lead to the eradication of measles. A new one shot vaccine is being tested and has been tested for more than three years and has proven 90 per cent effective. It was also noted that few side reactions were experienced by the 18,000 children involved in the clinical studies.

DOCTOR TALK

By Robert Benjamin, M. D.

Many readers will wonder why medical science has spent so many hours of research and millions of dollars on such an illness. They remember vaguely having had the disease with only elevated temperature and a body rash.

But many children having measles or one of the other childhood diseases do have serious complications from such universal illnesses. One of the most serious complications is that involving the nerves of hearing. These childhood "trick" diseases can specifically affect one or both inner ears and in the status reported to us as a perceptively deafening noise.

Each year hundreds of thousands of females, who have not had all of the childhood diseases as a child, contract one of these illnesses. This can prove very serious if such an infection occurs during the first three months of a pregnancy. Such a complication can lead to the loss of the pregnancy or can cause serious congenital abnormalities in the infant.

Public interest to eradicate measles is that the vaccination campaign not unlike the one against polio.

Dear Louisa,

We usually take our vacation in June and the children enjoy going to the beach where we rent a house and do our own work. This would be a good plan except for three things.

The first is that all three of us like to visit our friends to visit us which invitation most of them accept. The second is that my husband and my friends love to drop in on us for a day or two and the third is that this leaves me cooking, washing dishes and cleaning while the rest of the crowd is out swimming or taking a sun bath.

We have already decided to refuse to go to the beach this summer as always come home exhausted! What do you think about this?

Love,
Mother—N. C.

Address your letter to:
Louisa, 130 Third St.,
S. E., Washington, D. C.

NEWS NOTES

BACK TO THE 200
Washington—After twelve days of freedom, Goldie the Finnish golden eagle is back in its zoo cage with his mate, Regina, 200 year-old eagle. Regina, the 79-year-old eagle, came out of his cage when keeper momentarily left the door open. The eagle's escape made national wide headlines and brought the zoo hundreds of letters not to mention an increase in admissions.

ANTI-NECKING BILL
Raleigh, N. C.—As a drive for safety on the highway, an anti-necking bill has been introduced in the North Carolina general assembly. The bill would make it unlawful for a driver to embrace a companion while operating a vehicle on any public road. The bill would not hinder persons who park to "neck."

MUSIC SOUTHERS COVS
Waikato, New Zealand—Dairymen here are using their music to calm their cows. At 5 a.m. daily a radio station broadcast an hour of light, soothing music especially for cows. Weather forecasts are given for the dairymen's benefit.

RESOURCES 'WHOR AND CASH'
Jersey City, N. J.—Firemen were called to a small apartment fire, they found Mrs. Ruth Hinton, 60, and piles of cash on dressers and in drawers. Police were called and they took the money, and Mrs. Hinton to the bank and after three hours had counted a total of \$22,998 in currency and \$76.34 in coins.

WEDS DOMEED MAN
Cherterfield, England—Although widowed at the age of 17, Brenda Meehan said she has no regrets. Soon after she was married to a man named Owen Needham, 24, he was admitted to a hospital and doctors found an incurable disease. He was dead three days after they were married.

ROBBERY FOILED
San Francisco—When Miss Joy Swanson, a teller, called the bank in which she worked, to say she could not come to work because of illness, an employee took the message and whispered it to the mouthpiece. "Robbery, call police," Miss Swanson did not know the robbers left the bank with \$27,212; police were waiting and arrested them.

AWARDS WORKERS
Reading, England—At 68, Alfred Goswell, an electrical contracting business, decided to retire. He gave his company to the four children who had served him so faithfully over the years. Goswell said he had saved enough money to live comfortably but he thought he would leave it to himself.

WHO KNOWS?

Answers To Who Knows

1. George Washington Goethals.
2. The cavalry.
3. "Cursed be he that moves his bones."—The reason in this perhaps some of the pitchers who have pitched in the major leagues better this year will be as good as dead.
4. In Northern Italy.
5. Water forms.
6. Because the Italian explorer, Amerigo Vespucci.
7. South America.
8. An Old Testament prophet who was doomed unless reforms were made.
9. Greenland.
10. It is the Spanish for "Rich Port."

Comment On Sports

Washington, D. C.—Despite the probability that the New York Yankees will be picked by a majority of sports writers as likely winners of the American League pennant this year, this writer believes this will be a year in which the Yankees don't make it.

In spite of the fact that Johnny Knease is a good manager and in his first year with New York, the league is better balanced and the Yankees will have to be much better to win.

It is true that Yogi Berra did not make the best of managers but he also did not make the worst. Even if Knease can do better job, the Yanks may not be so good enough.

The opposition should be stronger this year. Chicago should have great pitching and better catching. Baltimore should be a little stronger perhaps some of the pitchers who have pitched in the major leagues better this year will be as good as dead.

Chicago, Baltimore, Detroit, Cleveland or Minnesota clubs could win several flags.

Washington will be better, which is saying a lot, but the club should be better. The league, then, will be stronger than in this league, but several clubs could win several flags.

Chicago, Baltimore, Detroit, Cleveland or Minnesota clubs could win several flags.

And the guess is that one of them will, in 1965.

Lakeside Campus For Morehead State College Is Proposed

The President and Board of Regents of Morehead State College have under consideration what is probably the most far-reaching long range proposal in the 41 year history of the institution. It is a recommendation to establish another campus on Cave Run Reservoir. Construction of the federally financed dam - fourth largest in Kentucky - is scheduled to start in May with a target completion date of December 1, 1968.

The dam is about 10 miles west of Morehead on Licking River near Farmington. The proposal was submitted by Dr. J. E. Duncan, Chairman of the Division of Fine Arts and Dr. C. Nelson Grote, Chairman of the Division of Applied Arts. However, it was an "authorized" study that has been underway for some time. It reads in its entirety:

A Proposal for a Morehead State College Lakeside Campus

Many of our new and developing curricular and co-curricular programs require types of land and facilities which cannot be made available within the limitations of our campus. Furthermore, many of the services which we recognize as a part of our responsibility to the region are severely curtailed at the present time. It would appear that these programs and services can most satisfactorily be provided on an off-campus site. Since land has been appropriated for the construction of the Cave Run Reservoir and since the State and/or Federal Government (s) will be a part of this development available for public use, we are proposing that the President and the Board of Regents give consideration to the development of a Morehead State College Lakeside Campus.

This new campus could serve as an extension of the existing college providing laboratories and facilities for present and expanding instructional programs and services with the following functions:

- A. Fine Arts:**
 - Expanded summer music camp similar to Interlochen.
 - Development of a summer dramatics repertoire program.
 - Development of a summer art institute.
 - Housing and boarding for fine arts clinics, seminars, and special programs.
 - Concerts and dramatic productions.
- B. Applied Arts:**
 - Cooperative experienced programs for students in hotel, motel, and restaurant management and food service curricula.
 - Agriculture land laboratory.
 - Pre-forestry laboratory.
- C. Health, Physical Education and Recreation:**
 - Student recreation.
 - Water safety and boat laboratory.
 - Experience programs for recreational supervisors.
 - Camping experience laboratory.
- D. Science:**
 - Geological laboratory.
 - Biological laboratory.
 - Aquatic laboratory.
 - Ecology studies.
 - Wild life sanctuary.
 - Conservation.
 - Study of local flora.
- E. General College:**
 - Facility recreation (lodge, picnic area, and beach)
 - Conference center for the Appalachian Region. (e.g., NEA Leadership, FFA and FHA activities and the Methodist Conference)
 - Housing accommodations for large on-campus events. (e.g., Homecoming, KEA, band and choral singing)
 - Special summer classes and institutes. (e.g., writers workshops, creative dramatics, and dance institute)

Characteristics of Site:
A tract of land consisting of approximately 500 acres with varying topography would be needed. It should be located on the lake front with an adequate beach area and should be close to an adequate beach area and should be close to an existing highway or access road. The criteria in selecting an appropriate location should emphasize natural beauty and terrain. Possible, an adjacent area should be held in reserve for future expansion. An administration building would serve as the hub of the campus. Ancillary areas for instruction, performance, housing and recreation would be located approximately in relation to their respective functions.
All buildings would be rustic and integrated with the natural.

The Lord has performed another miracle on Rev. Clifford Hutchinson's body in the way of healing. We are sure you will want to share this new experience with him. This is a rare miracle that the Lord has performed for him in the past few years. So come out and hear the message he has for you.

The Cranston Church Of God Welcomes You

environment. Landscaping would exploit the terrain, and the lakeside in such a way as to provide an appropriate atmosphere for creative thought, expression, and relaxation.

- Proposed Buildings:**
- Administration Building
 - Assembly Hall
 - Outdoor Theater
 - Classroom Buildings
 - Cottages
- Auxiliary Facilities:**
- Boat dock and bath house
 - Picnic area
 - Parking lots
 - Tennis courts
 - Beach
 - Shuffle board and badminton courts
 - Softball field
 - Marching band drill field
 - Area for horseback riding
 - Nature trails

- Suggested Priority In Developing the Campus Complex:**
- Site development including access roads and utilities
 - Administration Building, temporary outdoor theater parking lot, and beach.
 - Assembly Hall, ten (10) cottages, and recreation facilities
 - Classroom buildings, ten (10) cottages, and drill field.
 - All-purpose outdoor theater with covered stage and bleacher seating.
 - Expansion of beach, bath house, boat dock and other recreational and auxiliary services.
 - Limited purpose outdoor theater.

Administration Building:
This building would be the major structure on the proposed campus. Initially, it would be used for all functions on a limited scale. We suggest that it provide housing for fifty (50) persons in double room units adaptable for multiple use. In addition, food services would need to be provided for 500 persons. An all-purpose room would serve as a convention hall until the assembly building is completed. This room would then become a recreation area serving the entire complex. In addition to these three major provisions, a number of ancillary services would be included in the structure.

Assembly Hall:
This building would have a central area which would serve as a convention center seating approximately 450 persons indoors. This space would be used for all group activities of a performing nature. In addition, it would be a center for practice and/or conference rooms for individual and small group activities would be provided. Instruction and/or administrative offices would be included in this structure. Special provision would have to be made for storage of instruments and equipment. This building should be heated for year-around use.

Cottages (20):
Each cottage would house twenty-four (24) students or congeners with a counselor provided. Adequate shower provisions would be provided for the occupants. Storage for clothing and personal effects would of course be included in this facility. The heating to be provided by a large fireplace and provision would be made for year-around heating. These units could be quite rustic and therefore relatively inexpensive.

Classroom Buildings (5):
These buildings would provide the major facility for instruction and leadership development on the college complex. In addition, there would be offices, small studios, permanent laboratories, and storage facilities. Each building would have a small multi-purpose room for group activities, classes, and small meetings. These units could have provision for heating at a later date.

All-Purpose Theater (Outdoor):
A sheltered stage with sufficient lighting and sound equipment for dramatics and music productions would be included. Adequate storage for props and sets would need to be provided in this structure. Bleacher-type seating, utilizing the natural terrain, would be included. All outdoor conventions and major programs could be conducted from this theater.

Limited Purpose Theater:
The time will soon come when one theater will be inadequate especially when more than one function is scheduled at the same time. In addition, when a dramatics production is in rehearsal and a music production is in session it will be necessary to have two theaters. Therefore, provision should be made for a secondary theater with a sheltered stage and sufficient lighting and sound for music productions and speakers, with a bleacher-type seating arrangement provided.

KSB Admission Policies Have Been Standardized

New Standardized admission policies for The Kentucky School for the Blind have been given approval by the State Board of Education. The policies adopted are the result of recommendations by an ad hoc study committee which was appointed some time ago by Harry M. Spates, state superintendent of public instruction. Admission at the Louisville school will now be approved only under the following conditions:

- No one with an I. Q. of less than 60, as shown by an appropriate psychological examination, shall be admitted.
- No unduly emotionally or mentally disturbed individual can be accepted because of the lack of appropriate facilities at the school and the probable disruption of the other students' efforts.
- Prospects living within a reasonable commuting distance may not be admitted to residence units, unless undue circumstances warrant an exception.
- In addition, all students under consideration for either dismissal or transfer will be referred to the superintendent's advisory committee on admission and release for proper action.

LOGIC
- Query to those who say that in representing news of racial discrimination and related turmoil the news media are promoting them: When the news media report a murder, are they promoting murder?

TIED IN KNOTS AT SPRING TRAINING - Steve Hamilton, 27, New York Yankee pitcher and assistant baseball coach of Morehead State College, says he got all tied up in knots during spring training and shows how it feels. The other pitcher Stan Williams.

Smith Withdraws From Race, Edwards To Face Wetherby

Sen. Marvin Edwards, D-Lawrenceburg, announced Saturday he will seek renomination as an anti-administration candidate in the 20th District. His move regenerated a race which had all but faded when attorney Clifford Smith of Frankfort withdrew last week, as a major opponent of former Gov. Lawrence Wetherby.

State Police To Build New Camp For Boys

The Kentucky State Police have announced plans for a proposed boys camp to be built of 10 and 14 who have been in regular attendance in school and from indigent families unable to afford a camping trip for them. Bassett said.

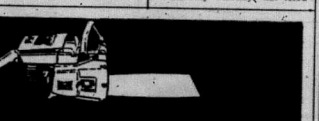

Camp activities will include sports and recreation, physical fitness training, courses in safety subjects, and vocational training in police courses and other subjects.

Bassett said the police plan to erect four steel buildings large enough to handle 30 boys each; two additional buildings for counseling, instruction, doctors and clergyman; a house for a year-round custodian; a chapel; recreation building; a mess hall; mess hall and walk-in refrigerator; plus a bath house, boat dock, recreational area, hiking trail and swimming area.

Morehead Sailor In S.E. Asia

Firesman Apprentice Russell D. Kidd, USN, son of Mr. and Mrs. Della C. Kidd of Morehead in Thailand aboard the general steamer ship USS Polk, taking a part in a joint U.S.-Thailand amphibious assault exercise.

The exercise, called "Jungle Drum II," is designed to provide experience for Thailand American forces in combined operations, since, at treaty negotiations, they could be called on to fight together at any time.

Community Leaders Invited To 'War On Poverty' Meet

Gov. Edward T. Breathitt has issued invitations to some 6,000 Kentucky community leaders to attend a conference in Louisville Apr. 19-20 designed to guide local action in the war on poverty.

The conference will feature practical instruction in community planning to take advantage of provisions of the Economic Opportunity Act. Representatives from every county are expected to attend. The conference is sponsored by the Kentucky Commission on Children and Youth. It will lay heavy emphasis on programs for younger Kentuckians, from pre-school to college age, the governor said.

State officials and spokesmen from the Office of Economic Opportunity (O. E. O.) in Washington will explain the general terms of the Act while smaller groups and consultants will show how to organize for community action, to prepare requests and forms for grants, how local programs elsewhere have been set up, and what their effect has been so far.

O. E. O. speakers from Washington will include Mrs. Elizabeth Ross, consultant on community action programs, and Miss Velma L. Lintford, director of rural programs. Dr. Stephen Corstee, regional coordinator for the O. E. O., Charleston, Va., and representatives from the U. S. Children's Bureau will also take part.

Kentuckians on the program include Congressman Carl Perkins, James L. Peel, Frankfort, State coordinator of anti-poverty programs; and Al Richie, president of the Kentucky Development Association.

The conference will be held at the Sheraton Hotel in Louisville with registration set for 9 a. m. Apr. 19.

Fruit Growing Job Training To Be Given

Job training in fruit growing methods, successful in other areas of Kentucky, will now be offered to 20 farmers from Casey County.

State Economic Security Commissioner C. Leslie Dawson said the class, to be conducted under the Area Redevelopment Act, has been approved by the U. S. Departments of Labor and Health, Education and Welfare, which provide funds for training.

The economic security department will select the trainer through its Danville local employment office. Dawson said. Approximately \$10,560 will be provided in training allowances of about \$32 per week for each student, he said.

What happens to starved appliances

Just like people, starved appliances break down. What else could happen when an appliance is deprived of adequate electrical power?

Today, most homes have the same electrical entrance panel (fuse box) which they had years ago. Yet the use of electricity has increased many times. Circuits thus become over-loaded; appliances can not operate efficiently and require unnecessary repairs.

Tuberculosis Rate in State Is 8th Highest

Kentucky's tuberculosis case rate and death rate dipped slightly in 1964 but the state still had the eighth highest case rate and the second highest death rate of all states within the continental boundaries of the U.S., according to comparative figures released by the National Tuberculosis Association.

The previous year (1963) Kentucky was fifth highest in case rate and tied highest in the highest death rate in the nation.

The rates are based on the number of cases per 100,000 population. Kentucky reported 1,190 new active cases of TB in 1964 for a rate of 38.1. Two hundred sixty-nine deaths were reported that year for a rate of 8.6, almost twice the national average of 4.5. The national average case rate is 28.7.

States with a higher rate of tuberculosis than Kentucky were Virginia, Arizona, Tennessee, Maryland, New Mexico, Alabama and New York.

In death rate Kentucky is topped by Arizona. Kentucky had the lowest rate of TB cases, 6.8, and Nebraska had the lowest death rate ever recorded in any state, 1.0.

Your Library WILL THEY BE ABLE TO COPE?

THE AMALGAM GIANT by Louis Sirochidin. A misadventure of a young boy and his dog who are determined to harm him.

PLEASE PASS THE GRASS by Lesone Adams. A collection of pictures and ideas that will make your child more conscious of nature. A mass for spring.

SPACE WITCH by Don Freedman. A fantasy which reads a rocket ship instead of a broom and things get very complicated.

MOYMOY! by Leo Politi. A charming story of Chinese-American children and their interesting customs.

THE IN BETWEEN by Elizabeth Alton. A story. Lynn Richards feels that she is neither a girl nor a boy.

WAY STATION by Clifford Simak. Science fiction about a one-hundred-year-old man and his "purpose" in interplanetary communication.

SCREWBALL by Albert Abrams. A post-robotic boy finds life complicated by the constant comparison with his twin brother.

HALFBACK ON HIS OWN by Jackson Schuy. A young man learns more of the rules of the game when he tries to make the college football team.

THE FRODO THURSMAN by Kyrle Tennant. A young man who is threatened by a volcano and unsuccessfully tries to make the natives to leave.

CITY OF THE GOLDEN HOUSE by Madeline Pollard. In Nero's Rome, a young boy and his British slave are involved in a strange and adventure.

RIDE LIKE AN INDIAN by Henry Larson. A summer with Jerry on a Western ranch, complete with Indians, Apaloocha horses, and success.

CRUSADE IN EUROPE by Dwight Eisenhower. Facts, pictures and maps of the World War II in Europe, along with the personal account of the Supreme Commander in the Allied Forces make this book a masterpiece of historical literature.

ACT ONE by Moss Hart. The memoirs of a great playwright contain humor and a gradual insight into the world of the theater.

CAPTAIN NEWMAN, M. D. by LEO Rosten. The heart-warming story of an Air Force physician, his patients and their problems.

THE JUDAS TREE by A.J. Conlin. Man is seldom as ready as when Dr. David Morley finally gains full knowledge of himself, he does not like what he sees.

The Bowen Coburn Library is open Tues., 12:30 to 3:30 and Thursdays 9 to 5. We have many interesting books, and would like to serve you. Please come in.

Children Need Intelligent Care, Consideration In Today's World

Will your child be prepared to cope with the world in which he will live as a grown-up? The world of the future in which your child will live probably will differ vastly from that of today, but as a parent, many changes have taken place since you were a child. One of your responsibilities as a parent is to help guide the developing mind of your child so he will be equipped to live creatively in the changing world, according to Dr. Bert F. Coody, University of Kentucky Extension family life specialist.

A child usually is curious, inquisitive, adventurous, and impulsive. These are the qualities that make him a child. To often parents curb these valuable qualities instead of encouraging them. Being patient with the child's questioning, doing too much for him so that he waits for the world to come to him, or doing too little for him so that he lacks confidence in his own natural qualities that can help him feel at home in his emerging world.

Coody has these suggestions for parents in helping develop the child's growing mind. Don't do too much for the child, but give him just enough help for him to be just enough help for himself. Answer his questions with interest when possible, rather than give him the answer. If you don't know the answer, say so—but go on to look for the answer together, remember, "over-amer" with more information can be understood.

Develop your child's imagination by having him listen to good stories. Help him discover the world of fantasy and encourage him to make up his own "make-believe" stories. But help him "keep his feet on the ground" so that he doesn't confuse fantasy and reality.

Provide good music for the child's listening and encourage him to take advantage of this. If he shows some talent, help him to take music lessons for himself. When he starts to school, encourage his beginning efforts in art and reading. But don't judge these as adult standards or even

What with the many and growing predictions that dire things are in store for the future, it is not surprising that many parents will soon be apprehensive throughout the world, the older a person is, perhaps the sicker he should consider himself.

As a result of an increase in the number of telephones in the Local Calling Area of the Morehead Exchange, and in accordance with the company-wide rate schedule approved by the Public Service Commission of Kentucky, the General Telephone Company of Kentucky will put into effect the following rates for local exchange telephone service to be effective April 6, 1965:

| Business | |
|------------------------|---------|
| One-Party | \$11.75 |
| Two-Party | 10.90 |
| Multi-Party | 8.00 |
| Semi-Public Paystation | 11.70 |
| PBX Trunk | 17.63 |

| Residence | |
|-------------|---------|
| One-Party | \$ 5.40 |
| Two-Party | 4.40 |
| Four-Party | 3.85 |
| Multi-Party | 3.85 |

A copy of the revised Morehead Local Exchange Tariff is on file at our Morehead Business Office for public inspection.

GENERAL TELEPHONE COMPANY OF KENTUCKY

Feed 'Grain Sign-Up Ends Today

Growers who participate in the 1965 feed grain program will receive definite advantages over growers who elect not to participate, according to Freeman Hocheimuth, chairman of the Agricultural Stabilization and Conservation State Committee.

First, explained, the diversion payment earned for reduction of the farm's 1965 acreage of corn, barley, or grain sorghum assumes the participating grower a substantial income from the diverted acre, regardless of drought, flood, insect) hail, or crop disease.

This is also true of the price-support payment which is made on the acreage planted in 1965 to corn or more of the three feed grains, no matter what disposition is made of the crop. The price-support payment is available throughout the year.

Further, the chairman said, if the farm operator elects it, an advance payment of one-half of the estimated production payment will be made at the time of signing up or as soon as possible after that time.

Growers take part in the feed grain program by diverting at least 20 percent of the farm's feed grain base acreage into an approved conserving use and carrying out other provisions of the program. If more than the minimum acreage is diverted, a higher rate of payment will apply. Maximum diversion is 50 percent of the farm's feed grain base of 25 acres, whichever is larger.

The minimum rate of payment is based on one-fifth of the county's total price-support rate for the crop. The rate for the price-support payment rate. A higher rate (one-half the total price-support rate for the county) applies to diversion between 20 and 40 percent of the base. If 40 percent or more of the base is actually diverted, the higher rate applies to the entire acreage.

Farm operators may file applications to take part in the 1965 feed grain program at the ASCS County Office. The signing period extends through tomorrow (Friday).

MARINES TO S. VIETNAM The landing of two Marine Corps battalions in South Vietnam could lead to ground fighting between the States, Communist units and Communist guerrillas. Up to now, there had been no American ground troops.

Abandoned Mine Closure Asked By State Unif The State Natural Resources Department will soon submit proposals to put jobs in East Kentucky to rest sealing up the entrances to abandoned mines.

To a Harlan County accident Mar. 8, three youths were killed when they were caught in a rock fall in a sugar mine which had been abandoned before the primary closure provisions of the more recent strip-sugar mining law.

To correct this situation, Robert Montgomery, deputy commissioner of the department said, he hopes to get funds under the Appalachian Regional Act to expand our very limited AFD-C program, so that the worst of these death traps can be closed.

The AFD-C program referred to is a Federal-State-financed project that has put jobs in Eastern Kentucky to rest sealing up the entrances to abandoned mines. The effort will require far more funds and may at work than the current project can bear.

However, Natural Resources Commissioner J. O. Matlock has ordered a number of strip-sugar mines to take care of the problem here, and now by the commissioner's direction, the strip mining division will assist the State Department of Mines and Minerals in seeing that no strip-sugar mining signs are maintained at all times.

Care Is Urged In Selecting Tobacco Land

Since tobacco is a high-value crop using a small percentage of the farm's land, the best available field should be picked for each year's planting. Take the most fertile and well-drained area, says Ira Massey, University of Kentucky Agricultural Extension Service specialist. "Building up the fertility level and soil structure of the field to be used takes time and patience—but large yields of usable burley can be secured this way."

(1) The field should have good drainage of surface water and sub-surface. This helps aerate the crop.

(2) Good soil structure is important; such soils will hold moisture well for dry periods. Good soil drainage are highly important. Land needed to produce the burley, especially in the early part of the growing season, is needed to produce the burley, especially in the early part of the growing season.

State Moves To Give Aid To Unemployed Parents

The State Economic Security Department is attempting to get a self-improvement program for basic education classes now being established by local boards of education.

Commissioner C. Leslie Dawson said the department's basic aim is to continue to improve the quality of services which are provided for these families.

"We also want to prepare the out-of-school participants to basic education classes as soon as the Federal Government approves a grant to finance this adult education program," Dawson said.

The request for funds, made by the State Education Department, is now pending in the U. S. Department of Health, Education and Welfare.

The program will be carried out under the department's work experience and training program, a part of an unemployment project currently financed by a \$5 million Federal grant under the Economic Opportunity Act in the war on poverty.

New State Map Shows Oil, Gas, Other Lines

A new six-color map featuring gas, oil and electric facilities will be published by the Kentucky Department of Commerce.

The map shows the location of pipelines and transmission systems of 39 gas pipeline firms, and 39 electric-power service companies in the state. Line companies in the state include, firm names and interconnections, between gas, oil or electric systems are shown.

Also included on the 27 by 57 inch map are gas compressor stations and stripping plants, electric generating stations, and oil line pumping stations and refineries.

Copies of the map may be obtained for \$2.26, which includes tax, postage and wrapping. Mail orders should be addressed to Minerals Development Division, Department of Commerce, New Capitol Annex Building, Frankfort.

Good Quality Seed Called 'A Bargain'

High quality seed is a bargain, says B. W. Fotherby, University of Kentucky Agricultural Experiment Station seed specialist.

"That's because the so-called 'cheap' seed often is low in germination and frequently contains noxious weed seeds."

Actually, high quality seed retails only from 10 to 10 percent of a field crop's total cost—but the returns are far out of proportion to higher yields, cleaner fields, etc.

Drill box surveys show many farmers plant untested and unanalyzed seed—seed that came from their own grain or in a neighbor's yard and lacking in variety or expected performance information. It also contains a high percentage of weed seed since home seed rarely is properly cleaned.

Fotherby points out: (1) Plant only seed that is properly tested and labeled to comply with federal and state seed laws; (2) seed adapted to your area; (3) buy from a reputable dealer; (4) buy early to get a good choice; and (5) have home-grown seed cleaned by a reputable processor if you must use your own.

Arbor Day Proclaimed By Governor

Gov. Edward T. Breathitt has proclaimed Apr. 2 as Arbor Day in Kentucky.

"When as the planting of trees touches the lives of each of us and is a symbol of our faith in the future," he said, "I urge our citizens to improve the attractiveness of our land; to improve the soil; to improve the trees in yard and farm alike; and to memorialize our dependence upon this renewable resource."

The governor's proclamation was issued in compliance with a joint resolution by the 1954 General Assembly, which designated the first time in Kentucky permanent Arbor Day on the first Friday in April.

At the same time, Mrs. Gene Combs of Hazard, president of the Garden Club of Kentucky, Inc., recommended that groups across the state—especially county and city schools—observe the day by planting trees on public grounds.

Capitol oak or other seedling are available, she noted, on a one-per-acre basis from the State Forestry Division, Frankfort.

Season's First Fire Reported Near M'head

Last Tuesday afternoon the Cumberland District of the Cumberland National Forest had its first fire of the spring season.

A fire escaped the control of Forest Ranger W. H. Platteau located on Slab Camp Creek east of Morehead 6 miles south of Morehead and spread to adjacent dry grass and weeds, where it spread so rapidly that he could not control it by himself. After escaping control the fire burned over about three acres of Gambel's timberland and spilled across a strip of National Forest land owned by the property of Robert Goodman on Lambert's Ridge by the time a Forest Service tree planting crew which had been dispatched to the fire arrived and started control work.

The fire was controlled within the hour after burning over about five and one-half acres. Gambel made the mistake of burning in mid-afternoon on a windy day without taking the precaution of clearing the area of inflammable material.

During the next three weeks we will have several films on the District for showing at schools. These films are on conservation of our natural resources and we will also make them available for showing to clubs or other groups while they are on the District. Interested parties may contact this office.

Plant Bed Location Is Vital Factor

By Adrian M. Razor County Agent

The location you choose for your tobacco plant bed is very important. Since many of you have not prepared your tobacco bed yet, let me suggest that you give much consideration to location. A plant bed should have good exposure to the sun so therefore, let's keep them in the open. The soil should be well drained and a good ditch should be plowed around it in order to keep surface water from running over it. Surface water not only brings in weed seed, it also brings in manure of our troublesome leaf disease.

Let's also think a little bit about the kind of place you are going to put our tobacco. First, let's look for well-drained soil that is in a reasonably good state of fertility. If there is a sod crop on it now, it should be turned right over. If there is a cover crop on it, it should be turned before the crop is knee-high. This means for someone who may be in a "somewhat" tobacco plot right now that if we are going to change in the next two or three years we need to be preparing a plot by getting it in a good stand of grass and getting it a good basic fertilizer. In this way it will be ready for tobacco when we get ready to move our crop to it. Certainly, we don't want to have a cash crop to a poor piece of ground and expect to build it up in one season.

Let's always test our tobacco ground especially since we have been running into trouble in those fields that haven't been limed recently, mainly for manganese. Manganese deficiency we need to keep in mind if we are going to produce smoking-quality tobacco, we need to rotate our tobacco and fertilize accordingly.

Victor of several counties. County Extension Council The Rowan County Extension Council will meet at the Extension Office Friday evening at 7:30. Leland Hall, chairman, urges all members to attend.

County Development Assn. The Rowan County Development Association Development meeting will be held the evening of March 31 in the library of the Rowan County High School. All members of this association are urged to be present.

Spring PTA Conference Is Thursday

The annual Spring Conference of District 12, Kentucky Congress of Parents and Teachers, will be held next Thursday at Mayville Junior High School, Counties in District 12 include Rowan, Bath, Carter, Fleming, Madison, Meade, Wayne, and Elliott.

Registration to begin at 9:30 a. m. with the program started to start at 10 a. m.

Guest speaker will be Randall Martin, minister of the Bethel Missionary to the Congo, a former teacher in New York State and who studied in Belgium. His address will be "Enriching Family Life for Progress."

A hat designed to her needs and desires will be awarded the PTA unit president who has the largest number of delegates present.

Mrs. Edmond Burton is president of District 12.

Ohio Company Gets Contract For Two Roads

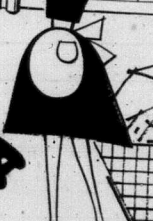

A contract for two bituminous surfacing projects in Rowan County has been awarded by the Highway Department, Commonwealth of Kentucky, to the Ohio Concrete Road Co., Inc., of Columbus, Ky., and its subsidiary, the Fleming County, a distance of 2.5 miles; and the Open Fork Road from Ky. 174 to Ky. 32, a distance of 4.7 miles.

L. P. Cavett Company, Louisville, Ohio, submitted the low bid of \$144,972.40.

game postponed--clothes drying too

get a raincheck or an electric dryer

Can't do much about the ball game, but you do have a choice about your clothes drying. Buy an electric dryer, and rain or shine, you'll always be able to dry clothes just when you want to. Indoors. Sunshine-fresh in gentle electric heat.

flameless, fumeless, clean as electric light. So why not see your dealer about modern electric dryer? Let him show you how to put an end to rainchecks on clothes drying for good. And in the bargain, move one step closer to the joy of total electric living.

CALENDAR GIRL - Nancy Williams, an attractive, 18-year-old freshman, has been selected as the Calendar Girl for the March of Dimes State College. Nancy, a commerce major, plans for East Mignon Hall, a new women's center which will be completed by next February.

Claig Sprout And His Friend, TIMOTHY TUGMUTTON

DEAR MISTER EDITOR:

I see by the papers where a fellow in Florida has poured himself a concrete front yard and painted it green. A boy like he could be crazy like a fox. Back when I was a boy folks always had their front yard under a heavy grove of oaks. And they had no grass to mow, and let the logs eat the acorns off in the fall, sometimes when the preacher was coming on take Sunday dinner, they would get the broom and sweep it off and neat. That fellow in Florida has got plenty of sense, and the next time you get a little concrete left over, mister Editor, just pour it in the front yard.

Incidentally, I see reading where a fellow in Wisconsin was lamenting that, with all the wonder 'scay done since agriculture, we ain't never come up with a lawn green that'll grow to a height of 2 inches and stop. Figger the U. S. Department of Agriculture has just looked this little item and their attention they'll get on it pronto, or just as soon as the Congress appropriates \$25,000 Washington column writer says Secretary of Defense McNamara is still fighting that Battle of the Bulge. He has saved billion dollars by closing down shipyards, Government hospitals, air bases, and Army camps but he can't get the兵 to wear a 10-cent belt buckle that now men wear. The Navy, Army, and Air Force. They been working on this project now for three years and Leathernecks was still holding out for their special 35-cent Washington Column writer says McNamara was so mad about the designer would get some clothes matter he's still holding out for the Marines that'll have pants that don't need no belt.

The papers didn't give the no play, but I figger the top news item of the week was where some organization trying to give Billy Graham to put on another curand in Washington. I wish him well, but I don't think one man can do Washington any good. When Billy was there that other fellow was charged about 100 converts that night, and I figgered that if he could convert the nation's capital in 19 years and four months, Washington was built for subjugating, conquering and pleasuring since past where one man can dent the nation.

And a Goldwater Republican was asking Congressman J. Pickens of Texas and Congressman Claude Pepper of Florida to introduce a joint bill, I wish him well, but I don't know what the Great Society need was a Pickle-Pepper bill.

Yours truly, Claig Sprout and Timothy Tugmutton

WINNER - This pastel portrait of a little girl took first place in the adult category in a national art competition for handicapped artists of all ages. It was announced by the National Art Society for Crippled Children and Adults (The Easter Seal Society). The artist is Mrs. Sylvia Hawkins of Santa Clara, Calif., a post-polio victim.
