

---

—A PROFILE of the bed of the Ohio river was completed by Dr. Cushing and Mr. Henry Hall, at 10 o'clock of Thursday last. The deepest part of the river was 15.5 feet; the width from the water works to the Kentucky shore, about 1,351 feet. The main bed, or the rock bearing that name, was just five inches under the surface of the river, and the chin eighteen and a half inches from the surface. The wooden tunnel, 153 feet long, has been completed, all but the covering, and the mains are being laid therein on a bed of concrete.
