

MSU Employees and Students:

Our Morehead State University Information Technology staff, and our technology vendors, have been working on the recent campus technology service disruption. Their work has been ongoing, and I would like to thank them for their diligence.

As a part of the disruption, we have discovered that we may have been subjected to a cyberattack against a limited number of computers and systems on campus. While our teams work with vendors, we are continuing to keep our data center and network down across campus to further protect our systems. Additionally, we are isolating various computers and systems while they are screened by our staff and our vendors. At this point, it appears that no personal data was compromised, but our staff will continue to check as they move through the various systems.

As noted by IT in a previous email, you may find that email is accessible on cell phones and through off-campus computers for limited use. If you have significant projects or communication needs, we would encourage you to utilize off-campus computers and allow on-campus computers to remain off-line as they systematically work through the various technical checks.

For instructors teaching online summer courses, we would ask, to the extent that you can, that you communicate to students assignments that are not reliant upon on-campus technology for the next few days as checks continue. Any instructor with questions may contact the IT Service Desk at 606-783-4357 or by visiting the Service Center in Ginger Hall 111.

We will continue to keep you updated, and our apologies for the disruption.

Many thanks,

Dr. Jay Morgan  
President
